

7120 movement cannot store energy when winding

Is there a ZSE movement in a baoshihua 7120?

The ZSE and ZSH were different movements used in different watches (although Shanghai No. 2 did commission Shanghai Watch Factory to produce Baoshihua brand watches for a short time in the 1980s; they have ZSH movements). A ZSE movement wouldn't appear inside a straight-from-the-factory vintage 7120. Is it a later agglomeration of parts? Possibly.

What is a 7120 caseback?

A number of different models were manufactured, but probably the model produced in the greatest numbers was the 7120, a tongji watch without calendar in a stainless steel case. This is an early 7120, one of the earliest. Early 7120 casebacks are different from most 7120 casebacks; they look a lot like the ones found on 1524 models.

What do early 7120 casebacks look like?

Early 7120 casebacks are different from most 7120 casebacks; they look a lot like the ones found on 1524 models. The batch number, 201, is the lowest number I've seen. It's possible that 201 was the first batch of 7120s produced, and it may have been the first batch of SWF standard movement watches intended to be sold domestically.

Is a 708 a replacement movement?

Possibly. The 708 batch number suggests that the movement should have been manufactured a few years earlier than 1986. At the very least, it's a replacement movement. I don't know what to make of the missing S on the caseback.

Usually this extra energy creates a spark due to the high back emf produced. But it is not always possible for a coil to create sparks. It is clear if we try out the experiment. ...
