

SummaryBattery and powertrainOverviewInteriorAion Y PlusMarketsHycan Z03The Aion Y offers an option of three different battery packs, marketed as Magazine Battery and developed in-house by GAC. The Magazine Battery features a special layout that provides better performance of high temperature resistance and explosion resistance and can be built as an NMC lithium-ion battery or a lithium iron phosphate (LFP) battery. The energy density of the battery system on the Aion Y is 184Wh/kg, and the power consumption per 100 kilometres under worki...
