What is Australia's gas resource base?

Australia's gas resource base includes one in-situ coal seam gasification project, the Leigh Creek Energy Project. In-situ coal gasification refers to gas being extracted from coal seams by underground heating to produce synthesis gas ('syngas'). The Leigh Creek Energy Project has an estimated TDR of 2,622 PJ (2 Tcf).

Will 'doubtful' energy resources of Australia take legal action if it cancels permit?

Advisors to Resources Minister Madeleine King thought it "doubtful" Energy Resources of Australia would pursue legal action if she decided to cancel its mining permit. Rio Tinto is attempting to end decades of disputes with minority investors, traditional owners and governments over the project in the Northern Territory.

Is Australia a net exporter or importer of oil?

Australia is a net exporter of energy commodities but, notwithstanding this, it remains a net importer of oil products. Australia's total energy production decreased by 2.5% in 2021-22 to 21,219 PJ (Table 1.2; Figure 1.2). This was largely driven by a significant reduction in uranium production.

How are Energy Resources measured?

Mineral and petroleum energy resource estimates are often documented as industry standard measurements of volume or mass. Coal and uranium are generally measured by weight (tonnes), while oil and gas are generally measured by volume (barrels/cubic feet). However, the energy content of different energy commodities varies significantly.
