

Why should Barbados invest in Arcalis?

Arcalis will improve the environment and economies of Barbados and the Caribbean, and establish Barbados as a Centre for Renewable Energy Excellence. Barbados is a Renewable Energy Powerhouse. Barbados is capable of generating enough energy locally to eliminate its dependency on fossil fuels.

What energy sources are used in the Arctic?

Electricity generation and installed capacity In the remote Arctic the most commonly used energy sources for electricity generation are diesel, followed by several mature renewable energy technologies such as hydropower, wind power, and photo voltaic (PV) power. In Section 3.2 the technologies used to harness energy are discussed in more detail.

Why is electricity cost so high in the Arctic?

All the afore mentioned factors result in high electricity cost for the end consumer. Renewable energy sources show their capability of reducing such impacts. Currently, hydropower is the most used power source of all renewable energy sources in the Arctic. Where hydropower resources are available, they can provide affordable electricity.

Is wind energy available in the Arctic?

Wind is a widespread energy source in the Arctic, with a high potential in coastal areas [56,57]. Wind potential is available throughout the year with seasonal variations. Wind energy can be harnessed using wind turbines and analysis (eg. Refs. [32,33]) has shown that a number of installed wind turbines can be found in the Arctic.

How does oil price affect electricity prices in Arctic communities?

It is likely that this drop in the oil price had an effect on the fuel cost in Arctic communities, and that this resulted in lower electricity prices. For example, in Hoonah, Alaska, the price of electricity fell from 65 USD /kWh in 2013, to 53 USD /kWh in 2018 as the data collection shows. 3. Energy technologies and socio-economic impact 3.1.

Could tidal and current energy be a solution in arctic conditions?

In the Arctic living plant matter is scarce but creating energy from organic waste could be of interest. Yet, the technology is not established in Arctic conditions. Tidal and Current energy can be a solution for coastal communities in the Arctic.

5 ???&#0183; This Barbados National Energy Policy (BNEP) document is designed to achieve the 100% renewable energy and carbon neutral island- state transformational goals by 2030. ...

Export Barbados (BIDC) and Wello Oy, a company from Finland specializing in wave energy technology, have announced a new cooperation agreement to explore the opportunities that lie in Barbados" ...

If all goes according to plan, Barbados could soon be producing energy from the ocean and biofuel from the pervasive sargassum seaweed as Government presses ahead with plans to make the island 100 per cent reliant

...

An online tool designed to enhance knowledge of the best practices and local adaptation actions on Arctic renewable energy and energy efficiency. Website. Powered by Nature: The Old Crow Solar Project How one

...

The Ministry of Energy and Business is considering having ocean energy technology operational on the island to contribute to the Barbados National Energy Policy target of 100 per cent ...
