

How much power does Belgium produce from solar panels?

In Belgium, power production from solar panels already exceeded the 5,000 megawatt(MW) mark several times this year. This is as much as five large nuclear reactors: the current Belgian nuclear power park can still supply a maximum of just under 4,000 megawatts of power.

How much solar power will Belgium have in 2022?

According to trade body SolarPower Europe, Belgium installed around 500W of solar generation capacity per person in 2022, meeting the targets set out in its 2019 National Energy and Climate Plan (NECP). However, SolarPower Europe expects this per-capita capacity to jump to around 1,600W by the end of the decade.

Does Belgium have a solar industry?

In recent years, Belgium's solar industry has seen continuous growth in operational capacity. According to data from Energie Commune, Belgium's operational solar capacity has increased annually since 2020. Between 2017 and 2018, annual solar capacity grew by 23%, followed by a 20.7% increase from 2019 to 2020.

How has Belgium's solar capacity changed over the years?

According to data from Energie Commune, Belgium's operational solar capacity has increased annually since 2020. Between 2017 and 2018, annual solar capacity grew by 23%, followed by a 20.7% increase from 2019 to 2020. Between 2022 and 2023, there was a remarkable growth of 37.1%, reaching a new high.

What is the largest power plant in Belgium?

This is as much as five large nuclear reactors: the current Belgian nuclear power park can still supply a maximum of just under 4,000 megawatts of power. All this means that on sunny afternoons, our solar plants form the largest power plant in Belgium.

Will Belgian solar power surpass hydropower by 2025?

However, the Belgian government plans to make solar play a crucial role, surpassing biomass in its energy mix by 2025 and surpassing hydropower by an order of magnitude by 2030. This expansion will be partially funded by the European Union.
