

What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

What type of energy system does Bolivia use?

Similar to the country's total energy system, the power sector relies heavily on natural gas (AETN, 2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

Can Bolivia become an electricity exporter?

Bolivia also plans on using large hydropower plants in their plans to become an electricity exporter to neighbouring countries (MHE, 2014). With this added capacity, Bolivia could account for up to 21% of electricity exports in South America (Pinto de Moura et al., 2017).

Is Bolivia's economic model running out of gas?

"Bolivia's Economic Model Is Running Out of Gas"; Retrieved 2022-05-02. "BNamericas - Bolivia eyes crude imports as fuel use jumps"; BNamericas.com. December 6, 2019. {cite web}: CS1 maint: url-status (link) "International - U.S. Energy Information Administration (EIA)"; Retrieved 2021-04-27.

How can Bolivia improve energy production?

Bolivia continues to make efforts to upgrade the infrastructure needed for renewable energy production. The National Interconnected System (SIN), which the government has put in place, aims to improve the nation's capacity for producing electricity by building additional power plants, transmission lines and substations.

Can Bolivia have a low-carbon power system?

A sketch of Bolivia's potential low-carbon power system configurations. The case of Applying carbon taxation and lowering financing costs Energy Strateg. Rev., 17 (2017), pp. 27 - 36, 10.1016/j.esr.2017.06.002 J. Clean. Prod., 199 (2018), pp. 687 - 704, 10.1016/j.jclepro.2018.07.159 Technol. Forecast. Soc.
