

Can Egypt achieve 42% of its energy generation capacity by 2035?

At present, Egypt has set an ambitious objective of achieving 42% of its energy generation capacity from renewable sources by 2035 (known as the 2035 energy target) (IRENA, 2018b). To better exploit the RE potential in Egypt, a few review studies have covered different aspects of RE technologies.

Can Egypt harness energy from sustainable sources?

This review summarises the current energy outlook of Egypt while analysing the country's potential to harness energy from sustainable sources. In general, it has been found that Egypt's renewable energy sector is yet to be exploited for sustainable energy production through its diverse and plentiful resources.

Does Egypt still rely on conventional energy sources?

According to the rate of increase in the consumption of conventional energy sources in Egypt alongside the CO₂ emissions over the period from 1971 to 2016 (for 47 years as shown in Fig. 1) (The world bank, 2022), it is evident that Egypt is still relying primarily on the conventional energy resources. Fig. 1.

What is a large-scale energy storage project?

The project aims at providing the scientific, technological and policy basis required for the development and implementation of large-scale energy storage in Egypt, enabling increased penetration of renewable energy sources in the Egyptian energy system.

Is Egypt a good place to manufacture solar & wind energy components?

Increasing the local manufacturing share of various RE technologies provides a radical solution for this problem. Egypt has a substantial potential for manufacturing solar and wind energy components. For example, wind turbine towers are manufactured locally and hence they are cost-competitive in Egypt.

Can Egypt transition from conventional to renewable energy resources?

This should allow for carrying out an energy transition from conventional to RE resources in Egypt; where a similar analysis has been carried out in Iran and allowed for developing five different energy systems focusing on the underlying RE production and efficiency improvements (Noorollahi et al., 2021).

3 ???· Huawei proudly unveils its flagship Power-M Digital Power solution, setting a new benchmark in energy innovation, on the sidelines of its participation in Cairo ICT 2024. Power-M is an advanced ...

3 ???· Huawei proudly unveils its flagship Power-M Digital Power solution, setting a new benchmark in energy innovation, on the sidelines of its participation in Cairo ICT 2024. Power ...

According to Ref. [151], which considered generation and storage techniques, risks, and security concerns associated with hydrogen technology, hydrogen is quite a suitable ...

CAIRO - 3 December 2023: Egypt signed a letter of intent to join the Battery Energy Storage Systems Alliance (BESS), which is one of the main initiatives of the Global Energy Alliance for People and Planet (GEAPP) during COP28 in ...

Energy storage with VSG control can be used to increase system damping and suppress free power oscillations. The energy transfer control involves the dissipation of oscillation energy ...

Each battery system for Cairo's Metro Line 4 will be built up from 76 MRX batteries to provide an energy storage capacity of 130 Amp-hours (Ah) at 110 Volts (V). MRX batteries are designed ...

With the increased penetration of renewable energy resources, energy storage systems (ESS) are considered the key solution to bridge the gap between energy consumption and generation ...

Despite the relatively small contribution of Egypt to the African and the global RE market, Egypt has a power generation potential of 73,656 TWh/y through concentrated solar ...

Muhammed A. Hassan is an associate professor of Mechanical Power Engineering at Cairo University, Egypt. ... Thermal energy storage systems are often disregarded in large-scale ...

Your top infrastructure stories for the week: Italian energy company Ansaldo Energia has landed a 20-year contract for maintenance of eight gas turbines it built for Cairo ...

Virtual storage for large energy generation systems is implemented by connecting all energy supply sources, conventional or renewable, to a common massive electrical grid; the demand side (consumers) are all also connected to the ...
