

Why should you choose solar Finland?

Solar Finland and its subsidiaries with strong long-term background are experts in all aspects of solar energy. Our extensive know-how and experience of over 40 years make it possible to develop in different areas making our products and services competitive in the solar energy markets both domestically and abroad.

How much solar energy does Finland produce a year?

Areas with the most favorable conditions can produce roughly twice the solar electricity that Finland does. In the best areas, the total radiant energy is about 2500 kWh per square meter a year. In Finland, the corresponding figure is approximately 900 kWh per square meter- slightly more in the most southern parts and slightly less up north.

Is solar energy a viable alternative to self-consumption in Finland?

In Finland, solar electricity has so far been a financially competitive alternative only if the self-consumption rate has been high. Now, however, the situation is changing, as solar farms are being built to produce electricity to sell directly to the main grid. Globally speaking, solar energy generation is a massive business.

Does Finland have more solar power than Germany?

At an annual level, however, Finland gets roughly as much sunshine as countries such as Germany or Denmark. However, Germany produces 110 times more solar electricity than Finland, Denmark five times more, and Sweden four times more.

La historia de Solar Finland en el terreno de la energía solar comenzó en el año 1978, cuando sus fundadores empezaron a importar productos de energía solar a Finlandia. Como los mercados eran pequeños, al principio se vendían únicamente productos para uso en el archipiélago, así como en embarcaciones y caravanas. ...
