

Do you offer a laser welding service?

We offer a laser welding service to weld complete battery packs. This is ideal if you need to start welding while are waiting for a machine order, if you need a batch of parts welded for prototyping or preproduction, or if you need to validate laser welding in your manufacturing process.

Is there a quality assurance approach for laser welding?

Of course, if someone looks beyond the battery welding applications many in-process quality assurance approaches are available for welding. In the case of laser welding, the in-process monitoring is mainly based on imaging, acoustic emission, and E/M signal techniques in general.

How can a quality feature of a weld be correlated?

Their common point is that they are practically investigating how the process emissions, the input parameters, or/and the variables can be correlated to a quality feature of the weld mainly using empirical or data-driven approaches [18, 19].

What materials can a laser weld without a filler?

Lasers can weld dissimilar materials with varying fusion temperatures without the need for filler material. Examples include steel-copper, steel-aluminum, aluminum-copper, and steel-nickel. Laser parameters can be updated automatically for different needs.
