

Is Egypt energy intensive?

Egypt is among the most energy intensive economies in the MENA region as well as in the world. The Egyptian energy intensity is almost twice as high as in some neighboring countries like Morocco and Tunisia and four times as high as industrialized countries like Japan and Germany.

Who is responsible for energy policy in Egypt?

Currently in Egypt, there is no overarching ministry which has overall responsibility for developing and coordinating the national energy strategy and policy. Instead, the responsibility for the energy sector is primarily shared between the Ministry of Electricity and Energy (MOEE) and the Ministry of Petroleum (MOP).

How has Egypt positioned itself as a regional energy hub?

Over the last decade, Egypt has prioritised national energy security and positioned itself as a regional energy hub. This focus involves both domestic initiatives and international collaborations to expand renewable energy sources, improve energy efficiency, and invest in green hydrogen technologies.

What is the energy savings potential in Egypt?

The studies and surveys carried out by national and international organizations estimated that the total energy savings potential in Egypt is about 23%. Due to its high energy consumption and outdated technologies, the industrial sector holds about 40% of the total energy savings potential.

Can Egypt improve its energy resource utilization?

On sectoral level, most industrial processes, equipment and consumer appliances in Egypt have 20% or more higher energy consumption than the best international practices. Therefore, Egypt has a great potential to improve the efficiency of its energy resource utilization across all segments of economic activities.

Can Egypt reduce energy consumption by 5% to 2022?

Based on a recent energy study conducted by the GOE, the broad economic sectors of Egypt can reduce energy consumption by 5% to 20% without compromising output. In fact, this figure was used to set the national target for energy consumption reduction at 20% by 2022 relative to the energy consumption in 2007.
