

What is the ESS ETF?

The ESS ETF is an European ETF that follows the performance of firms specializing in battery energy storage systems. The companies included are engaged in such categories as raw materials, manufacture, enabler, and emerging technologies. It is the second European ETF in this sector after BATT.

What are some interesting energy storage ETFs?

Another interesting energy storage ETF is GRID, which is focused on alternative energy infrastructure companies such as power management company Eaton Corp. (ETN), industrial conglomerate Johnson Controls International PLC (JCI), and electronics and automation pioneer Abb Ltd. (ABB).

What is GRID ETF?

GRID is an ETF with a focus on the energy sector. It includes companies of different sizes, from large-cap (over 44 percent) to micro-cap (approximately 2.5 percent). GRID is an ETF that was incepted on November 17th, 2009.

What is the future of energy storage?

The global transition from conventional energy sources to green energy is driving the development of BESS (Battery Energy Storage Systems) technologies and related ETFs. The costs of energy storage are projected to reduce by 66-80 percent by 2030 and the global energy storage market is expected to grow up to 426bln USD.

Are energy ETFs a good investment?

Energy ETFs can be an excellent way to overweight an attractively valued sector with high free cash flow generation. Many firms in the energy sector, accustomed to the boom-and-bust cycles of oil prices, have strengthened their balance sheets and now gush with free cash flow.

Should you buy an energy ETF?

Invest in stocks, fractional shares, and crypto all in one place. "The main benefits of owning an energy ETF are not having to guess which company will outperform and reducing concentration risk by owning a broad basket of companies," says Curtis Congdon, president of XML Financial Group.
