

What is a light holder used for?

These lamps and lamp holders are used for general commercial and residential lighting applications, such as for can lights, ceiling lights, floodlights, spotlights, and vanity lights. Visit this page to find out more about our medium-base (E26) lamp holder offerings.

What is a fluorescent lamp holder?

Fluorescent lamp holders are designed for use with fluorescent bulbs, which are known for their high energy efficiency (compared to incandescent and halogen bulbs) and low cost (compared to LEDs). They can accommodate linear, bent, circline, and compact bulbs with single-pin or two-pin and shunted or non-shunted socket designs.

What is a medium base lamp holder?

Medium-base lamp holders--also referred to as Edison-base lamp holders--accommodate a variety of screw-base bulb types. While screw-base bulbs are available in several sizes, the medium-base ones are E26 (MES in North America) and E27 (ES in Europe).

What is a wedge base lamp holder?

Wedge-base lamp holders are generally used for smaller low wattage light bulbs, such as those found in string lights. The lamp holder socket allows for contact between the lamp holder contacts and the exposed wires of the wedge-shaped bulb base. This design enables users to replace bulbs quickly and easily.

How to choose a light bulb holder?

When designing lighting equipment, the selection of the proper lamp holder, also called light bulb holders or light bulb sockets is a critical step in the process. The selection of the bulb will depend on many variables such as size, lumens, energy efficiency, bulb life, etc.

What is a lamp holder socket?

The lamp holder socket allows for contact between the lamp holder contacts and the exposed wires of the wedge-shaped bulb base. This design enables users to replace bulbs quickly and easily. They are available with many mounting options like brackets, PCB tabs, snap-in and twist-in.
