

Does Fiji have a good energy supply?

Like for many other SIDS Fiji's geographical situation means that affordable and accessible energy supply is a challenge. The Island state depends heavily on imported fossil fuel to meet its energy needs, nevertheless, renewable energy sources, mainly hydro, account for 55% of the country's total energy production.

What is the energy situation in Fiji?

It is a small island developing state (SIDS) that is heavily dependent on imported fossil fuel for its energy needs. The paper attempts to determine the past and current energy situation in Fiji, challenges faced and strategies to overcome these challenges. In 2014, Fiji generated 859 GWh of grid electricity from 259.8 MW of power plants.

Does Fiji have a national energy policy?

Using external aid (German Technical Cooperation (GIZ) - Deutsche Gesellschaft für Internationale Zusammenarbeit and United Nations Development Programme (UNDP)), Fiji has been able to successfully review National Energy Policy for Fiji which acts as a guideline for the goals and objects to achieve by 2030.

Can Fiji achieve net-zero national emissions by 2050?

The Fijian Government is committed to achieving net-zero national emissions by 2050, recognising that Fiji has abundant untapped renewable energy resources which can be systematically harnessed and used to support the nation's sustainable development priorities.

Can Fiji achieve energy efficiency improvements by 2030?

Fiji's NDC (2020) commits to achieving nationwide energy efficiency improvements equivalent to a 10% reduction in overall emissions by 2030. SDG7 promotes efforts to double the global rate of energy efficiency improvements by 2030.

Why is Fiji pursuing energy sustainability?

Fiji's pursuit of energy sustainability will contribute to improved economic prosperity and will support access to new technologies. This NEP supports both energy sustainability and energy security objectives through a specific focus on demand-side and supply-side energy efficiency improvements.
