

## How to stack batteries outdoor battery station

You can't have multiple plugs going IN to a battery, but you don't need to anyway. It sounds like you want the power to automatically swap from grid to battery once night rolls around, if that's ...

I would have thought that adding the transformers before and after the station batteries would have limited the wattage in the coil lines to keep safe, but as soon as I flip the second battery ...

Yes. You can stack an inverter on two batteries, and then stack another set on top of that. The whole stack is still only 6 units high. It's fully supported; that configuration is in the manual.
