

What type of energy is used in Jordan?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Jordan: How much of the country's energy comes from nuclear power?

Is Jordan a regional leader in green energy?

This long-read questions Jordan's progress in the field of renewable energies and challenges the triumphant image of Jordan as a regional leader in green energy. It is featured in the book "Dismantling Green Colonialism: Energy and Climate Justice in the Arab Region," co-published with Pluto Press.

Is biomass a source of electricity in Jordan?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Jordan: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

What is the biggest solar power plant in Jordan?

In October 2016, Jordan signed a power purchase agreement with Masdar, a clean energy developer based in Abu Dhabi, UAE to build the biggest single solar installation in the country, Baynouna Solar Power Plant, with a 200 MW capacity.

How much biomass will Jordan generate by 2020?

The government is looking to generate 30-50 MW of biomass by 2020. By November 2014 Jordan had 10 MW of installed capacity from renewable energy, and had over 15 renewable energy power plants in progress to be completed by the end of 2015, raising the installed capacity to 500 MW, representing 14% of the overall installed capacity.

How much natural gas does Jordan have?

Jordan was estimated to have only modest natural gas reserves (about 6 billion cubic meters in 2002), but new estimates suggest a much higher total. In 2003 the country produced and consumed an estimated 390 million cubic meters of natural gas. The primary source is located in the eastern portion of the country at the Risha gas field.

Renewable energy currently constitutes 30 percent of Jordan's energy mix: 44 the largest share after gas, and the largest domestic source. Renewable energy thus plays a pivotal role in determining energy costs and ...
