

What is energy in Libya?

Energy in Libya primarily revolves around the production, consumption, import, and export of energy, with a significant focus on the petroleum industry, which serves as the backbone of the Libyan economy.

What is bioenergy in Libya?

Bioenergy comprised 100% of the renewable energy supply. Oil is the major natural resource of Libya, with estimated reserves of 43.6 billion barrels. Libya is a member of OPEC.

What is Libya's energy supply based on?

Furthermore, in 2020, the combined revenues from oil and natural gas exports constituted approximately 73% of Libya's total export value. In 2020, the total energy supply (TES) primarily came from oil and gas, which contributed 53% and 43%, respectively, while renewables accounted for approximately 4%.

What type of electricity is used in Libya?

Renewable electricity here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal power. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Libya: How much of the country's electricity comes from nuclear power?

Why is Libyan natural gas important for European energy security?

Libyan natural gas is crucial for European energy security, particularly for Italy, which sourced 4% of its natural gas imports from Libya in 2023 via the Greenstream pipeline. This pipeline plays a key role in connecting Libyan gas fields directly to Sicily.

How much natural gas does Libya use?

In 2019, Libya consumed 271 billion cubic feet (Bcf) of natural gas, approximately half of its domestic production. The power sector predominantly accounts for the country's domestic natural gas demand, representing roughly 90% of its consumption in 2020.
