Solar Pump VFD. As the name implies, it is an electronic device that provides a variable frequency using solar power. Solar power means it is not applied directly to the VFD. There comes a solar panel first, which takes solar energy and converts it into electrical energy. But the output is in DC form.

The Solar pump inverter, also called solar variable frequency drive, converts the direct current of solar panel into alternating current. The input can be the solar DC power supply (DC 200V-350V, DC 350V-750V), and can also be single phase or three phase AC power supply (AC 220V, 380V, 400V, 460V, 480V), or the power supply can be from a built-in Maximum Power Point Tracking ...
