I've been wondering about the sensitivity of our Libbi controllers in terms of kicking into life when there's demand, so I have been downloading our usage figures from the MyEnergi Website. I've excluded all off-peak rate figures (23:00 to 06:00) and any other outlying off-peak periods (we top up the Libbis at cheap rate overnight, ditto car ...

The MyEnergi scheduling options are amazing and I really love the combined simplicity and effectiveness of the concept, however I must agree with Frits that a proper write up of its workings would be very much welcomed. I now set my Zappi to Eco+ mode (at 100%) to avoid it starting to charge. That cannot be the right way of working, right?

The Libbi would be my preferred for obvious reason in that I'd like to keep with myenergi product. Alternatives are there of course. My question is, why are the battery packs only sold to recommended suppliers and where can these businesses be found up in Aberdeenshire? I'm not seeing any near my home.
