Monitoring and testing with Nexus does not interfere with the operation of the lighting system or disrupt the power supply. System design is entirely flexible, with both a wired and wireless version of Nexus available. The Nexus wired system uses a dedicated cable network, making it ideal for areas where wireless communication is not possible.

Both types of central system operate on the same principle. The luminaire is fed, via emergency sub-distribution, from the central system. Static Inverter Systems (AC/AC) Static inverter systems operate in a similar manner to AC/DC Central Power Supply Systems, with the exception that the system constantly gives a 230V AC output.

High temperature Lead-Calcium battery operates 32°F to 122°F (0°C to 50°C);

Northern Mariana Islands emergi lite central battery system

Nickel-Cadmium battery operates 50°F to 104°F (10°C to 40°C); optional cold-weather -40°F to 122°F (-40°C to 50°C) Minimizes maintenance with standard advanced diagnostics and optional NEXUS monitoring system compatibility ; UL 924 Listed

82 EMERGI-LITE EMERGENCY LIGHTING & CENTRAL POWER SUPPLY SYSTEMS -- Introduction
What is a central power supply system? A Central Power Supply system (CPS) is essentially a large set of batteries at a single central location. In the event of a mains failure in the building, the batteries are used to provide reliable power for emergency ...
