What is Qatar's energy system?

Qatar has a unique energy system. The country's infrastructure is geared towards producing and exporting large volumes of natural gas, either directly (in a gaseous or liquefied state), or conversion to liquid fuels (gas-to-liquids) and petrochemicals.

Is Qatar reliant on fossil fuels?

Qatar's leadership recognizes that economic diversification is the key to continued prosperity, and long-term planning tools can provide the blueprint for a new economy that is less reliant on fossil fuel exports. The reliance of Gulf States on fossil fuels has led to domestic challenges as well.

Can a population of Qatar be used to determine aviation fuel requirements?

As Qatar has transformed into an international aviation hub, with most passengers only transiting through Doha's Hamad International Airport, the total population of Qatar cannot be used to infer aviation fuel requirements. Thus, we had to follow another approach. Historical aviation fuel use data were available from the IEA.
