The appliances in your home run on AC, not DC, which is why the solar inverter must change the DC output that is collected by your solar panels. When the energy gets sent to the inverter, it is in DC format but your home requires AC. The inverter grabs the energy and runs it through a transformer, which then spits out an AC output.

When you're looking at the cost of solar inverters, think about these things: Types of Inverters. There are different kinds of solar inverters, like string inverters, microinverters, and power optimizers. Microinverters are usually more expensive because they optimize each solar panel individually. [Inverter Capacity](#)
