

# The country's first new energy storage capacity

How big is China's energy storage capacity?

China's installed new-type energy storage capacity had reached 31.39 gigawatts by the end of 2023, the National Energy Administration (NEA) said on Thursday. Last year alone, 22.6 gigawatts of such capacity was installed, which was more than 3.6 times the figure at the end of 2022 and nearly 10 times that at the end of 2020.

Why did China's energy storage capacity expand in the first quarter?

China's energy storage capacity has further expanded in the first quarter amid the country's efforts to advance its green energy transition.

Why is China's energy storage capacity rocketing?

BEIJING, Jan. 25 -- China's energy storage capacity is rocketing to facilitate the utilization of growing renewable power amid the country's efforts to pursue low-carbon development. China's installed new-type energy storage capacity had reached 31.39 gigawatts by the end of 2023, the National Energy Administration (NEA) said on Thursday.

What is China's new energy storage know-how?

Recently, China saw a diversifying new energy storage know-how. Lithium-ion batteries accounted for 97.4 percent of China's new-type energy storage capacity at the end of 2023. Aside from the lithium-ion battery, which is a dominant type, technical routes such as compressed air, liquid flow battery and flywheel storage are being developed rapidly.

Why did China double its energy storage capacity in 2022?

Power lines in Yichun, China. China almost quadrupled its energy storage capacity from new technologies last year, as the nation works to buttress its rapidly expanding but unreliable renewables sector and wean itself off dirty coal. Capacity rose to 31.4 gigawatts, from just 8.7 gigawatts in 2022, the National Energy Administration said Thursday.

Where are new energy storage facilities being built?

According to the administration, the northern and northwestern parts of the country have seen the fastest development of new-type energy storage facilities, accounting for over 50 percent of the newly operational energy storage installations nationwide.

BEIJING, April 29 (Xinhua) -- China's energy storage capacity has further expanded in the first quarter amid the country's efforts to advance its green energy transition. By the end of March, ...

BEIJING, July 31 -- China's energy storage capacity is expanding to facilitate the utilization of growing
