

Is an uninterruptible power supply worth the investment?

But if you want to keep your home Wi-Fi network and some other key electronics up and running in the event of an outage,an uninterruptible power supply,or UPS,is worth the investment.

Should I buy the best ups?

These days many of us are working from home, so buying the best UPS your budget can stretch to is even more important. You may find that you're plugging in a lot more power-hungry devices into your home power supply, and this could lead to power cuts or power surges.

What is a ups & how does it work?

A UPS's job is to provide power to the devices connected to it if a primary power source is cut off or the voltage reaches extremely low levels. Primarily designed for things like PCs and network systems, it's basically a huge battery that works as a middle ground between standard AC power and a generator.

Should I buy a ups for my home?

You may find that you're plugging in a lot more power-hungry devices into your home power supply,and this could lead to power cuts or power surges. Your home likely won't have the power backup solutions that your office does,so buying a UPS for your home could be a very wise investment.

How much power does a ups deliver?

And if you need to provide power to more (or larger) devices at your computer workstation than our top pick can handle,this UPS can deliver up to 825 W--it's so effective that we had trouble finding home-office gear powerful enough to overload it in our testing.

Why should you buy an ups?

Ideal for keeping mid and high-end computer systems safe,the UPS comes with Automatic Voltage Regulation (AVR) to ensure safe voltage levels for all devices that are connected. It has featured data line protection that protects communication and network equipment from power surges and spikes.
