

What can a Viking Energy carry?

The Viking Energy can carry fuel oil, water ballast or drill water, potable water, methanol, brine, liquid mud and dry bulk. The Viking Energy is the world's first LNG-powered supply vessel. The bridge of the Viking Energy. The touchscreen operating console used on the bridge. Diagram of the piping on the Viking Energy.

Why did Equinor get a contract with Viking Energy?

After 17 years of continuous sailing for Equinor, the energy company has awarded Viking Energy with five new years of service in the North Sea. In addition to providing important work for vessel owner Eidesvik Offshore, the contract also triggers a ground-breaking R&D project to test zero emission technology on board the Viking Energy.

Why did Viking Energy choose a test vessel?

With its current focus on ammonia, the company is a front-runner for zero emissions, and having Viking Energy as test vessel was a natural choice. Not only was she the world's first supply vessel powered by LNG when delivered in 2003.

With 103 turbines, Viking is one of the UK's largest onshore wind farms. Viking became fully operational in September 2024, after more than 15 years in development, with 103 wind turbines now installed and an installed capacity of 443MW.
